

Goal:

- Serve as an SMS/Email agent for caregivers to interact with
 - A set of information (ex. Name, email, address, SSN, etc.)
 - Submit documentation that needs to be validated
 - Drivers license, passport, work authorization (if applicable), etc.
 - Certifications
 - Immunization records
 - Provide a filled out document for caregivers to e-sign
- Admin Platform
 - Web portal for staff to review all caregivers that need to be on-boarded and progress
 - Look at auto-validation and intervene if necessary
 - Final step
 - Automatically onboard the caregiver (ex. Create employee records in AlayaCare)
 -

Processing Certifications

1. Check if the info matches (name, dob, etc.)
2. Check if it is not expired
3. Check if it is from a reputable source
4. If it does not pass, go back to the caregiver and let them know
 - a. Ex. "Your HHA certification has expired in 2025..."
5. If it passes 1-3, pass on to human for validation
- 6.

GENERAL FLOW:

1. Agent reaches out to caregiver and asks for basic info
 - a. Name, email, address, ssn
2. Agent creates a document with the info filled it, and asks them to e-sign it
3. Agent begins requesting various documents that are required
 - a. Ex. drivers license, passport, certifications, etc.
4. Agent starts the validation process for each document
 - a. Matching information with the info that they submitted to cross validate
5. Staff approve the AI validations
6. Agent can submit background check task
7. Once every step is completed, the platform begins the onboarding process
 - a. Ex. creating a new record in AlayaCare
 - b. Doing any other integrations
 - c.
